OCC Operators S20 Bean-to-Cup Coffee Machine, by La Cimbali

Operators S20 Bean-to-Cup Coffee Machine is a super automatic machine designed for coffee stations where Italian espresso coffee is a must have. It is suitable for approximately 50-60 coffee loving Operators who drinks up to a total of 200 cups per day and is the perfect coffee machine when space is a critical factor. Easy to use, Operators S20 guarantees a superior in-the-cup quality. Operators S20 delivers a complete coffee menu utilizing coffee beans and fresh milk or UHT milk prepared in a pitcher. The quality of the beverages is guaranteed by the manufacturer LaCimbali's renowned expertise in espresso extraction and by innovative milk frothing devices such as the TurboSteam cold touch wand.

The Operators S20 Bean-to-Cup Coffee Machine comes standard for fixed water supply but can as an option be customized to operate with one external drinking water tank and one external sewage tank, to make it truly mobile and independent of fixed water supply lines. For safe transportation around the world in a 4x4, truck, helicopter or aircraft, the complete Operators S20 coffee system is protected by a customized flight case with carrying handles.

It has a patented boiler management system, which significantly boosts steam and hot water capacity, thus avoiding production drops also during rush hours.

The Turbosteam wand will simultaneously deliver steam and air, allowing the hands-free heating or frothing of large amounts of milk.

The Operators S20's 7-inch touchscreen display allows you to see different options on the drinks menu (pre-selection and Group Mode) and to customize images displayed by the machine (such as screen savers and during beverage dispensing).

The Turbosteam wand allows frothing the milk either without heating it by using the air only, or heating it by using air and steam, thus delivering an even wider milk menu. The Operators S20 lets you customize milk temperature for each selection (patented) and deliver milk portions at different temperatures to prepare stratified beverages.

The machine automatically performs programmable wash cycles during working hours. The Turbosteam milk frother wand is easy to disassemble and clean. Thanks to the Turbosteam wand you will not have any milk inside the brewing system.

The optional mobile configuration includes:

- BWT Filter Head
- BWT Bestmax Premium water filter
- Flowmeter for Bestmax Water filters
- Bestmax Best Flush valve
- Flojet Bottled Water System 5000 Series water pump
